Subject: Xypex C-500 vs C-500 NF Admix, C-1000 vs. C-1000 NF – Equivalency

To Whom it May Concern,

Xypex has manufactured 2 concentrations of Admix products; Regular and NF for many years.

Xypex Admix NF has double the concentration of active ingredients of C-500/C-1000 but is dosed at half the same value. Therefore, this results in the same amount of crystalline active ingredients in the treated concrete, it is just a more concentrated version of the same product.

Therefore, regardless of if Xypex C-500 is used at 2% dosage rate or if Xypex C-500 NF is used at 1% dosage rate, they all contain the equivalent amount of crystalline growth material per treated cubic yard/ meter. Therefore, test data related to waterproofing or water permeability under pressure can be interchanged for C-500, C-1000, C-500 NF or C-1000 NF admixtures.

These products are equivalent and we confirm that they can be used interchangeably at the recommended dosages as per the data sheets.

Best regards,

XYPEX CHEMICAL CORPORATION
